

Index to Authors and Subjects: **Volume 9, 2004**

(E) Editorial, (L) Letter

- Airborne molecular contaminants (AMCs), control using dry-scrubbing air filtration **1: 3**
- Airborne particulates
ISO and GMP limits **4: 133**
risk assessment for microbial contamination **1: 16**
- Audit, glass tubing manufacturers **4: 113**
- BBC (British Broadcasting Corporation), Panorama programme attacking the MHRA **4: 99(E)**
- Books reviewed, Ljungqvist B, Reinmüller R (eds), *Cleanroom clothing systems: people as a contamination source* **4: 139**
- Cleanroom technology
clothing as a contamination source: calculations of particle number **3: 83**
dry-scrubbing air filtration and AMCs **1: 3**
ISO 14644-1 and FDA guidance as a basis for an international sterile products GMP **4: 133**
- Closures
assessment of efficiency **4: 119**
hygienic risks to subsequent sterilization of product **1: 24**
- Clothing, cleanroom, as contamination source: calculations of particle number **3: 83**
- Containers
hygienic risks to subsequent sterilization of product **1: 24**
regulatory issues concerning leachables and extractables **2: 63(L)**
regulatory requirements in the EU **4: 101**
tubular glass: audit of manufacturers **4: 113**
tubular glass: manufacture, drug safety and product applications **4: 123**
- Contamination
airborne molecular contaminants, dry-scrubbing air filtration **1: 3**
microbiological: assessing patient risk from aseptically manufactured pharmaceuticals **3: 71**
microbiological: models used in pharmaceutical production **1: 11**
microbiological: primary packaging materials **1: 24**
microbiological: risk assessment in pharmaceutical cleanrooms **1: 16**
particulate, clothing as source: calculations of particle number **3: 83**
- Dean D, The assessment of closure efficiency **4: 119**
- Diecke A, Lipperheide C, Petran A, Norwig J, Schmidt S, Important aspects of regulatory requirements on primary packaging materials for pharmaceutical use in EU **4: 101**
- Dry-scrubbing air filtration, control of airborne molecular contaminants **1: 3**
- Emission control, dry-scrubbing air filtration systems **1: 3**
European Journal of Parenteral & Pharmaceutical Sciences, staff changes and awards **1: 1(E)**, **3: 69(E)**
- Factory design, User Requirement Specifications **2: 57**
- Farquharson G, EU GMP Annex 1 — ISO 14644-1 — FDA aseptic guidance. Is this a good basis for an International Sterile Products GMP? **4: 133**
- Filling lines, process validation by media fills **3: 89**
- Filter cartridges, for gas filtration — selection, validation and use **3: 79**
- Gas/vent filters, selection, validation and use **3: 79**
- Glass
auditing glass tubing manufacturers **4: 113**
manufacture of tubular glass: drug safety and product applications **4: 123**
- Good Manufacturing Practice (GMP)
audit of glass tubing manufacturers **4: 113**
ISO 14644-1 and FDA aseptic guidance as a basis for an international sterile products GMP **4: 133**
process validation — history, terminology and current status **2: 37**
risk profiling manufacturing processes **2: 49**
- Harrison T, Understanding past and proposed changes to the USP Chapter <643> total organic carbon **3: 94**
- Healthcare Compliance Packaging Council of Europe (HCPC Europe) **4: 132**
- Healthcare issues
malaria **3: 69(E)**
review of 2003 **1: 1(E)**
- Hunter JN, Gas/vent filters — practical factors to consider **3: 79**
- In-vitro* fertilisation (IVF) clinics, dry-scrubbing air filtration **1: 3**
- Inspection procedures, for incoming packaging, legal obligations **4: 129**
- ISO Standard 14644, as a basis for an international sterile products GMP **4: 133**
- Jahnke M, Hygienic risks caused by microorganisms trapped between closure and vial neck **1: 24**
- Ljungqvist B, Reinmüller B, Cleanroom dressed people as a contamination source: some calculations **3: 83**
- McCormick K, Right, not just first time, but every time **2: 57**
- Manufacturing processes, past, present and future **2: 57**
- Matthews BR, Leachables and extractables **2: 63(L)**
- Media fills, process simulation **3: 89**
- Microbiology
efficiency of sampling in monitoring procedures **2: 63(L)**
risk assessment: contamination of pharmaceutical cleanrooms **1: 16**
risk assessment: derivation and use of contamination models **1: 11**
risk assessment: patient risk from aseptically manufactured pharmaceuticals **3: 71**
- Patient Risk Model, microbial risk from aseptically manufactured pharmaceuticals **3: 71**
- Pharmaceutical industry
manufacturing processes, past, present and future **2: 57**
regulation **4: 99(E)**
takeovers and mergers **2: 35(E)**
- Plastics, use and regulation in primary packaging **4: 101**
- Primary packaging materials
assessment of closure efficiency **4: 119**
hygienic risks to subsequent sterilization of product **1: 24**
legal obligations for inspection **4: 129**
regulatory issues concerning leachables and extractables **2: 63(L)**
regulatory requirements in the EU **4: 101**
tubular glass: audit of manufacturers **4: 113**

- tubular glass: manufacture and drug safety **4**: 123
Printed packaging material, legal obligations for inspection **4**: 129
Process validation
 history, terminology and current status **2**: 37
 media fills **3**: 89
Prout G
 Gloom, doom and the feel good factor **1**: 1(E)
 New blood needed **3**: 69(E)
 Takeovers and mergers **2**: 35(E)
 Where praise is due **4**: 99(E)
Regulatory issues
 ISO 14644-1 and FDA aseptic guidance as a basis for an international sterile products GMP **4**: 133
 primary packaging materials in the EU **4**: 101
 validation: history, terminology and current status **2**: 37
Risk assessment
 microbiological: contamination models for use in pharmaceutical production **1**: 11
 microbiological: patient risk from aseptically manufactured pharmaceuticals **3**: 71
 microbiological: used in pharmaceutical cleanrooms **1**: 16
 risk profiling manufacturing processes **2**: 49
Schröder PA, Breunig A, The auditing of glass tubing manufacturers **4**: 113
Sharp J, Validation — how valid? **2**: 37
Stanley WBM, Muller CO, Application of dry-scrubbing air filtration to control airborne molecular contaminants in the pharmaceutical, biotechnology and life science industries **1**: 3
Stärk A, Pfohl M, Process simulation/media fill **3**: 89
Sterility
 ISO 14644-1 and FDA aseptic guidance as a basis for an international sterile products GMP **4**: 133
 potential failure caused by primary packaging materials **1**: 24
Sterilization equipment, dry-scrubbing the exhaust **1**: 3
Surface contact contamination, microbial risk assessment **1**: 16
Syringes, glass manufacture and drug safety **4**: 123
Tidswell EC, Risk profiling pharmaceutical manufacturing processes **2**: 49
Total organic carbon (TOC), changes to USP Chapter <643> **3**: 94
User Requirement Specifications (URS), manufacturing facility design **2**: 57
Validation
 history, terminology and current status *see* 37
 media fills **3**: 89
Water, changes to USP Chapter <643> total organic carbon testing **3**: 94
Wesch MW, The purchase of pharmaceutical packaging materials and rationalisation of inspection procedure **4**: 129
Whyte W, Eaton T
 Assessing microbial risk to patients from aseptically manufactured pharmaceuticals **3**: 71
 Microbial risk assessment in pharmaceutical cleanrooms **1**: 16
 Microbiological contamination models for use in risk assessment during pharmaceutical production **2**: 11
Whyte W, Reinmüller B, Ljungqvist B, Continuous microbial monitoring — a simple task if done correctly **4**: 63(L)
Woerder H, Pharmaceutical primary packaging materials made of tubular glass from the aspect of drug safety and product applications **4**: 123
